# Introduction to Kinetic Technologies

This handbook highlights the exciting products in both Power and Smart Connectivity product lines to assist you in selecting the best product for your design.

Kinetic Technologies designs and develops proprietary innovative, high-performance analog and mixed-signal integrated circuits, specializing in power, protection, video/audio interfacing and signal integrity, motor control, servicing consumer, communications, industrial, automotive and enterprise markets. Our core products sit “Behind Every Port™”, providing solutions to manage, protect, regulate, and monitor power coming through the port, satisfying the growing demand for USB Type-C, DisplayPort™, HDMI™, Ethernet, and other power connectors in system designs. We also offer solutions to convert the high-speed data through the port as well as to improve its signal integrity.

Through our proprietary circuit design techniques and silicon process technologies, we have created application solutions which solve problems by eliminating external components, reducing package size, reducing noise, protecting electronic loads, increasing power efficiency, and improving data quality without compromising performance. In fact, Kinetic Technologies products meet and exceed some of the industry's toughest specifications and standards, such as VESA DP, Qi/WPC, IEE802.3, IEC61000-4-2, IEC61000-4.5, UL2367, IEC62368-1 and AEC-Q100.

Kinetic Technologies was founded on the fundamental principle of innovation and that driving force is stronger than ever today. It is deep-rooted in Kinetic the understanding that consumer, communications, industrial, automotive and enterprise System OEMs must continually reinvent themselves by bringing better, faster, smaller, smarter products with new features and functionality to market with each new generation.
